Read the passage and select the correct answer for the question.

The screenshot shows a web browser window with the address bar displaying "https://www.internetsecurity.org". The page title is "How to Stay Safe Online". The article text is as follows:

1 Even though many of us are online more than 25 hours a week, we don't always think about how to stay safe on the internet. As such, we may be unaware that there are many cybercriminals lurking online. They spread software called malware through insecure websites and email attachments. They can use the malware to get your personal and financial information. Sometimes, they even open credit cards under your name or take money out of your bank account.

5 For these reasons, it's important to take steps to stay safe online. Fortunately, these steps are easy and straightforward. Check out the following five ways to steer clear of cybercriminals:

Choose strong passwords. A surprising number of people choose weak passwords, such as 12345. Weak passwords are easy for cybercriminals to guess. For this reason, you should choose a password that is a random mix of numbers, symbols, and letters. A good password should be at least 15 characters long. Keep your passwords in a safe online password manager so you don't forget them.

10 **Keep your privacy settings on.** Check all your social media accounts. Make sure your settings are on the highest privacy levels possible.

Only buy things from secure websites. You can spot a secure website in a few ways. Secure websites usually have a lock symbol in the web address. The web address should begin with https, not http. Looking out for that extra s will help you ensure you are using a safe site.

15 **Don't open emails or attachments from people you don't recognize.** These could be carrying malware that cybercriminals can use to access your computer.

Subscribe to security software. Security software regularly screens your computer for malware and viruses. Although you usually have to pay for this software, it's ultimately worth the peace of mind you get from protecting your computer.

20 If you are the victim of a cybercrime, report it to the police immediately. Take screenshots and keep as much evidence of the crime as you can. Take your computer to a repair shop and make sure there are no traces of malware left on your computer.

Share this information with your family and friends. All in all, it doesn't take much time to follow these steps. And once you do, you can feel safe browsing online.

What is the writer's claim?

- ☐ a. It's almost impossible to stay safe online
- ☐ b. It's hard to know who's a cybercriminal online
- ☐ c. None of the others are correct
- ☒ d. You can stay safe online if you follow a few straightforward steps

Read the passage and select the correct answer for the question.

How Will the Netherlands Cope with Climate Change?

The Netherlands faces a unique challenge when it comes to climate change. More than a third of the country sits below sea level. Due to its distinct geography, the country has dealt with flooding for hundreds of years. As a result, it has built a sophisticated system of walls along the North Sea. These walls help prevent flooding. However, as glaciers melt and sea levels rise, the walls will not be high enough to keep out the water. The world is paying attention to how the Netherlands prepares for climate change. Due to its geography, the Netherlands must act more quickly than other countries. The Dutch government's primary goal is to make the country more resilient to climate change. Let's take a look at three fascinating ways the Netherlands is working toward this goal.

The first strategy is that many cities are simply accepting flooding as the new normal. They are redesigning their cities accordingly. Cities such as Rotterdam, The Hague, and Amsterdam are building underwater reservoirs and lakes. During severe storms, water is diverted into them. The government is also building concrete tables and chairs throughout the cities. The furniture is attached to the ground. That way, it won't get swept away during floods or damaged by water.

The second strategy is to find new ways to grow food and manage distribution. During heavy flooding, it can be difficult for trucks to make food deliveries. Therefore, cities are finding unique ways to grow food locally. Many buildings now feature rooftop gardens, which grow food that can be delivered nearby. The gardens also serve an added benefit of catching rainwater. Another noteworthy innovation is Rotterdam's floating farm. The farm is filled with cows, chickens, and rows of vegetables. It floats around Rotterdam's rivers and provides fresh food to restaurants in the city. Farmers in the country are also being innovative. One farmer discovered a kind of potato that grows well in saltwater. Other farmers are starting to plant this potato across the country. That way, even if their fields flood with seawater, the potatoes won't be damaged.

The third strategy is to move people out of low-lying areas. Those areas are then deliberately flooded to keep water away from higher areas. Many people are upset when they have to move, but they accept it is for the greater good of the country. It will be critical for the Netherlands to continue to find ways to cope with climate change. However, these examples show that the country is off to a promising start.

The world is paying attention to how the Netherlands copes with climate change because _____.

- ☐ a. it will not be affected by climate change for a few more decades
- ☐ b. None of the others are correct
- ☒ c. it is already experiencing more flooding than other countries
- ☐ d. it has invested a lot of money in alternative energy

Puntaje de 0.67

Read the passage and select the correct answer for the question.

The screenshot shows a web browser window with the address bar displaying "https://www.internetsecurity.org". The page title is "How to Stay Safe Online". The article text is as follows:

1 Even though many of us are online more than 25 hours a week, we don't always think about how to stay safe on the internet. As such, we may be unaware that there are many cybercriminals lurking online. They spread software called malware through insecure websites and email attachments. They can use the malware to get your personal and financial information. Sometimes, they even open credit cards under your name or take money out of your bank account.

5 For these reasons, it's important to take steps to stay safe online. Fortunately, these steps are easy and straightforward. Check out the following five ways to steer clear of cybercriminals:

Choose strong passwords. A surprising number of people choose weak passwords, such as 12345. Weak passwords are easy for cybercriminals to guess. For this reason, you should choose a password that is a random mix of numbers, symbols, and letters. A good password should be at least 15 characters long. Keep your passwords in a safe online password manager so you don't forget them.

10 **Keep your privacy settings on.** Check all your social media accounts. Make sure your settings are on the highest privacy levels possible.

Only buy things from secure websites. You can spot a secure website in a few ways. Secure websites usually have a lock symbol in the web address. The web address should begin with https, not http. Looking out for that extra s will help you ensure you are using a safe site.

15 **Don't open emails or attachments from people you don't recognize.** These could be carrying malware that cybercriminals can use to access your computer.

Subscribe to security software. Security software regularly screens your computer for malware and viruses. Although you usually have to pay for this software, it's ultimately worth the peace of mind you get from protecting your computer.

20 If you are the victim of a cybercrime, report it to the police immediately. Take screenshots and keep as much evidence of the crime as you can. Take your computer to a repair shop and make sure there are no traces of malware left on your computer.

Share this information with your family and friends. All in all, it doesn't take much time to follow these steps. And once you do, you can feel safe browsing online.

What change should you make to your social media accounts?

- ☒ a. Turn the maximum privacy settings on
- ☐ b. Change the password for your social media accounts every few weeks
- ☐ c. None of the others are correct
- ☐ d. Turn your privacy settings to the lowest levels possible
